

RocketScript[™] Reverse Transcriptase (V3/2021-09-01)

[Cat. No.] E-3141, E-3142

Introduction

RocketScript™ Reverse Transcriptase developed by BIONEER is originated from M-MLV Reverse Transcriptase and genetically engineered to provide increased thermal stability and outstanding processivity. Its enhanced thermal stability enables to effectively synthesize cDNA with complex secondary RNA structures. It can be used at various temperatures (42-70°C) allowing increased specificity, higher yields of cDNA, and more full-length product than other reverse transcriptase.

Applications

- Gene synthesis
- First-strand cDNA synthesis from RNA molecules
- RT-PCR
- Random priming reactions
- Library construction
- Probe labeling
- mRNA 5'end mapping by primer extension analysis
- Real-time PCR
